

CS492 Logbook: Gülferiz Bayar

[22/Jan/2026]

CS492 implementation kickoff. Full team meeting: reviewed the demo outcomes from CS491, agreed on the implementation roadmap for Mentora, and split responsibilities for the semester. Everybody attended the meeting.

Gülferiz Bayar focused on frontend–user interaction layer, particularly:

- study scheduling interface
- AI assistant interaction experience
- alignment between implementation and report structure

[29/Jan/2026]

Weekly team meeting. Discussed frontend–backend integration and API structure.

Worked on mapping scheduling workflow from backend outputs to frontend visualization, ensuring that generated study plans can be clearly represented in UI.

[2/Feb/2026]

Worked on structuring **Schedule and Study screens** in React Native.

Focused on:

- weekly vs daily schedule representation
- improving clarity of study sessions
- designing intuitive user interaction flow

[7/Feb/2026]

Improved interaction between schedule generation and study execution.

Implemented clearer UI transitions and user feedback after schedule creation.

[12/Feb/2026]

Progress meeting with supervisor Uğur Güdükbay.

Presented scheduling interface and user interaction logic.

Received feedback on:

- simplifying user inputs

- improving readability of generated schedules

[14/Feb/2026]

Applied supervisor feedback:

- simplified scheduling interface
- reduced complexity in user inputs
- improved clarity of UI components

[18/Feb/2026]

Worked on frontend state management for scheduling:

- ensured consistency between backend data and UI
- handled edge cases such as empty or invalid schedules

[21/Feb/2026]

Improved study session rendering:

- aligned session blocks with timeline structure
- ensured consistency between weekly and daily views

[26/Feb/2026]

Weekly team meeting. Discussed notification system and integration with scheduling and social features.

[28/Feb/2026]

Implemented UI feedback mechanisms:

- visual indicators for completed vs planned sessions
- improved user awareness of study progress

[3/Mar/2026]

Meeting with supervisor Uğur Güdükbay.

Presented integrated scheduling and AI interaction flow.

Received feedback on:

- improving explainability of AI outputs

- making system behavior more predictable

[5/Mar/2026]

Improved user feedback mechanisms:

- loading states
- error handling
- smoother UI interactions

[7/Mar/2026]

Worked on AI assistant interface:

- improved readability of responses
- structured user prompts
- enhanced interaction flow between frontend and backend

[10/Mar/2026]

Contributed to Detailed Design Report:

- wrote frontend-related sections
- documented scheduling interaction logic
- ensured consistency between implementation and documentation

[12/Mar/2026]

Finalized and submitted Detailed Design Report.

[14/Mar/2026]

Handled edge cases:

- schedule regeneration inconsistencies
- UI-state mismatch issues

[19/Mar/2026]

Weekly team meeting. Discussed next iteration improvements and refinement plans.

[21/Mar/2026]

Improved UX:

- simplified navigation
- reduced unnecessary user steps

[26/Mar/2026]

Weekly team meeting. Conducted testing on scheduling and UI behavior.

[28/Mar/2026]

Improved responsiveness:

- fixed layout issues
- ensured compatibility across different screen sizes

[2/Apr/2026]

Refined user experience:

- improved overall flow from planning → execution
- ensured consistency across different modules

[4/Apr/2026]

Weekly team meeting. Discussed feature freeze and final stabilization tasks.

[5/Apr/2026] (BACKEND CONTRIBUTION)

Worked on **scheduler backend–frontend integration**:

- helped define API response structure for scheduling output
- ensured data format is consistent and easily usable in frontend
- contributed to improving session grouping and time-block structure

[9/Apr/2026]

Optimized frontend performance:

- reduced unnecessary re-renders
- improved state handling

[11/Apr/2026]

Full-group rehearsal. Presented scheduling system and AI-assisted study flow.

[16/Apr/2026]

Weekly team meeting. Final bug fixes and improvements.

[18/Apr/2026]

Reviewed UI consistency and interaction patterns.

[27/Apr/2026]

Meeting with supervisor Uğur Güdükbay.

Presented near-final system and explained:

- scheduling logic
- AI interaction
- user experience

[28/Apr/2026]

Worked on report visuals and system diagrams.

[30/Apr/2026]

Started Final Report:

- wrote frontend and system interaction sections

[1/May/2026]

Prepared architecture and system diagrams explanations.

[2/May/2026]

Updated report sections:

- system design
- UI explanations

- integration flows

[3/May/2026]

Final review:

- correctness
- readability
- consistency

[4/May/2026]

Submitted Final Report and participated in demo.

Presented:

- scheduling system
- AI assistant
- user interaction flow
