

[22/Jan/2026] - CS492 implementation kickoff. Full team meeting: reviewed the demo outcomes from CS491, agreed on the implementation roadmap for Mentora, and split responsibilities for the semester. Everybody attended the meeting.

[22/Jan/2026] - Farabi Sina Sari took primary ownership of backend modules for social interaction (friends and groups), real-time chat (REST + WebSocket messaging), and the AI assistant service (Gemini integration), while still supporting frontend wiring where those features surface in the Expo app.

[24/Jan/2026] - Farabi Sina Sari studied the existing FastAPI project layout (`main.py`, `deps.py`, `ws_manager.py`) and drafted how chat connections should be authenticated and how broadcast vs. direct messages should behave at a high level.

[26/Jan/2026] - Group sync on API contracts: agreed on JSON shapes for friend requests, group membership, and chat threads so frontend and backend could proceed in parallel.

[29/Jan/2026] - Weekly team meeting. Discussed PostgreSQL models needed for social graphs (users, friendships, groups) and chat persistence; updated the task board and next-week goals. Everybody attended the meeting.

[30/Jan/2026] - Farabi Sina Sari implemented and iterated on `friends_router.py` endpoints (list friends, requests, accept/decline patterns as per team design), including dependency-injected DB sessions and consistent HTTP error handling.

[5/Feb/2026] - Weekly team meeting. Reviewed progress on courses and profile modules; aligned on chat being the next vertical slice end-to-end. Everybody attended the meeting.

[6/Feb/2026] - Farabi Sina Sari extended `groups_router.py` for group creation, membership, and listing, reusing the same auth patterns as friends to keep permissions predictable.

[8/Feb/2026] - Farabi Sina Sari sketched WebSocket event types in `chat_router.py` (connect, join room, send message, error/ack) and how `ws_manager.py` should track active connections per user or room.

[12/Feb/2026] - Progress meeting with supervisor Uğur Gündükbay. The team presented the current backend structure and the planned real-time chat flow. Farabi Sina Sari explained the WebSocket manager design and how it avoids leaking messages across unrelated conversations.

[12/Feb/2026] - Received feedback to keep the chat protocol minimal in the first iteration (fewer custom opcodes), to document failure cases (disconnect, reconnect), and to ensure emotion/personality modules stay decoupled from the transport layer.

[14/Feb/2026] - Farabi Sina Sari applied the supervisor's feedback: simplified initial WebSocket payloads, added clearer server-side validation on incoming frames, and noted reconnection behaviour for the frontend team.

[16/Feb/2026] - Farabi Sina Sari paired with teammates on testing chat over local network (Expo client to FastAPI host) and fixed CORS/WebSocket origin issues encountered during device testing.

[19/Feb/2026] - Weekly team meeting. Demoed first working chat messages in a dev environment; assigned polish tasks (message ordering, timestamps, empty states). Everybody attended the meeting.

[21/Feb/2026] - Farabi Sina Sari refined persistence for chat-related models in `models.py` / `schemas.py` so message history could be retrieved consistently after reconnect.

[26/Feb/2026] - Weekly team meeting. Discussed integration of notifications with social events (e.g. friend request received). Agreed on which events the backend would emit first. Everybody attended the meeting.

[28/Feb/2026] - Farabi Sina Sari coordinated with the teammate owning `notification\_router.py` so social actions could trigger notifications without circular imports between routers.

[3/Mar/2026] - Meeting with supervisor Uğur Güdükbay. Showed the interim build: friends, groups, and chat working against PostgreSQL. Farabi Sina Sari walked through the AI assistant route design (`ai\_assistant\_router.py`) and how the Gemini API key is loaded from environment configuration.

[3/Mar/2026] - Feedback focused on guarding API usage (timeouts, sensible defaults for model name), keeping user prompts free of unnecessary PII in logs, and making sure the assistant responses stay within study-coaching scope.

[5/Mar/2026] - Farabi Sina Sari implemented error handling and timeouts around Gemini calls, standardized response schema for the mobile client, and added defensive checks for missing or invalid API keys in development.

[7/Mar/2026] - Farabi Sina Sari supported frontend work on `app/(tabs)/chat.tsx` and `app/ai-agent.tsx`: aligned URL constants with `EXPO\_PUBLIC\_API\_URL`, tested JWT-protected calls, and adjusted loading/error UI behaviour.

[12/Mar/2026] - Weekly team meeting. End-to-end review of “social + chat + assistant” user journey; prioritized bug fixes over new features for the following sprint. Everybody attended the meeting.

[14/Mar/2026] - Farabi Sina Sari debugged edge cases in WebSocket disconnect handling and ensured the connection manager cleaned up stale entries to prevent duplicate deliveries on reconnect.

[19/Mar/2026] - Weekly team meeting. Discussed workload for the Detailed Design / final reporting period and who would document which subsystems. Everybody attended the meeting.

[21/Mar/2026] - Farabi Sina Sari documented the chat and AI assistant endpoints (paths, auth, example requests) for the team report appendix and onboarding new contributors.

[26/Mar/2026] - Weekly team meeting. Regression testing across Android/iOS targets for chat; collected a short list of UI inconsistencies for the frontend owners. Everybody attended the meeting.

[28/Mar/2026] - Farabi Sina Sari performed backend regression tests for friends and groups after a schema patch (`ensure\_schema\_patches` flow), confirming migrations remained idempotent on a fresh database.

[2/Apr/2026] - Farabi Sina Sari refined AI assistant prompts (system instructions) so answers emphasize study planning, motivation, and clarification of course tasks rather than off-topic content, per team policy.

[4/Apr/2026] - Weekly team meeting. Final feature freeze discussion; only critical fixes allowed before supervisor review. Everybody attended the meeting.

[9/Apr/2026] - Farabi Sina Sari optimized a few chat-related queries and payload sizes after profiling with realistic message histories; coordinated with teammates to avoid N+1 query patterns in social feeds.

[11/Apr/2026] - Full-group rehearsal: Farabi Sina Sari presented the live flow from login → friends → group chat → asking the AI assistant for a study plan hint.

[16/Apr/2026] - Weekly team meeting. Closed remaining high-priority issues; prepared talking points for the final supervisor check-in. Everybody attended the meeting.

[18/Apr/2026] - Farabi Sina Sari reviewed security basics on social endpoints (authorization checks so users cannot modify others' relationships) and added clarifying comments where logic was non-obvious.

[27/Apr/2026] - Meeting with supervisor Uğur Gündükbay. Demonstrated the integrated Mentora build: social graph, real-time messaging, and AI assistant from the mobile client. Discussed future improvements (scalability of WebSockets, richer moderation) as out-of-scope for the course deadline.

[27/Apr/2026] - Supervisor feedback acknowledged the clarity of separation between transport (WebSocket), domain (friends/groups), and AI provider (Gemini); suggested documenting operational limits for concurrent connections in the final report.

[28/Apr/2026] - Farabi Sina Sari incorporated final minor notes from the 27/Apr meeting into internal docs and helped teammates consolidate screenshots for the project portfolio.
